

RIA Announces Record North American Robotic Market Sets in 2015

According to RIA (Robotic Industries Association), new North American records were set in 2015 for robot orders and shipments. Both sets grew a minimum of 10% versus 2014. RIA determined that the primary driver for this growth was the automotive industry. Furthermore, it was estimated that 260,000 robots are in use in North America today. The industry association noted that the hottest topic in robotics today is collaborative robots, an area where JMP Automation excels.
